

AutoLinkedIn

Automated Weekly LinkedIn Post Pipeline

1. What It Does

AutoLinkedIn runs automatically every Monday at 9:00 AM UTC. It searches the web for the latest tech news, generates a formatted LinkedIn post using Gemini AI, and emails you a draft for review. You approve it with two clicks and it publishes directly to your LinkedIn personal profile.

2. Weekly Workflow

1. Monday 9:00 AM UTC - GitHub Actions triggers automatically.

2. C

3. Triggering Manually

To generate or publish outside the Monday schedule:

1. Go to github.com/riyazthandora-maker/AutoLinkedIn

2. C

NOTE: Use the "Dry run" checkbox in the Publish workflow to preview without posting.

4. Renewing the LinkedIn Access Token

The LinkedIn access token expires every 60 days. When the Publish workflow fails with a 401 error, it is time to renew. Next renewal due: approximately 22 August 2026.

Option A - LinkedIn Developer Portal (easiest, no code):

1. Go to developer.linkedin.com and open your app.

2. C

Option B - Run the setup script locally (PowerShell):

```
$env:LINKEDIN_CLIENT_ID='<YOUR_CLIENT_ID>'
$env:LINKEDIN_CLIENT_SECRET='<YOUR_CLIENT_SECRET>'
python D:\Users\Riyaz\Projects\LinkedInPost\setup_linkedin_auth.py
```

Browser opens, approve on LinkedIn, copy the printed token into GitHub Secrets.

5. GitHub Secrets & Variables Reference

Location: github.com/riyazthandora-maker/AutoLinkedIn
> Settings > Secrets and variables > Actions

NAME	TYPE	DESCRIPTION
GEMINI_API_KEY	Secret	Google AI Studio API key
RESEND_API_KEY	Secret	Resend email API key
LINKEDIN_ACCESS_TOKEN	Secret	LinkedIn OAuth token (renew every 60 days)
RESEND_FROM_EMAIL	Variable	bot@gnosiscore.org (verified Resend sender)
GEMINI_MODEL	Variable	Optional - defaults to gemini-2.5-flash

6. Common Errors & Fixes

401 Unauthorized	LinkedIn token expired - renew using Section 4 above
403 Forbidden	Token missing openid/profile scope - re-run OAuth with all 3 scopes
API key is invalid	RESEND_API_KEY is empty or wrong - update in GitHub Secrets
model is required	GEMINI_MODEL variable is empty - delete it or set gemini-2.5-flash
No API key provided	GEMINI_API_KEY is missing - add it in GitHub Secrets

7. Post Format

Each generated post follows this exact structure:

```
[FOMO hook - one punchy line for CTO/exec audience]

>> [4-5 word headline]
* WHAT: [what the tech is + real-world use case]
* [specific financial impact or cost reduction with numbers]

[repeated for 3 items total]

[Closing question to invite comments]

#Hashtag1 #Hashtag2 #Hashtag3
```

To change the format or tone, edit the file prompts/system_prompt.txt in the repo.
